

Ultralow-Noise, High PSRR, Fast RF Low-Dropout CMOS Voltage Regulator

ZS6300 Series

INTRODUCTION

The ZS6300 series are a group of positive voltage regulators manufactured by CMOS technologies with high ripple rejection, ultra low noise, low power consumption and low dropout voltage, which can prolong battery life in portable electronics. The ZS6300 series work with low-ESR ceramic capacitors, reducing the amount of board space necessary for power applications. The ZS6300 series consume less than $0.1\mu\text{A}$ in shutdown mode and have fast turn-on time less than $50\mu\text{s}$. The series are very suitable for the battery-powered equipments, such as RF applications and other systems requiring a quiet voltage source.
